

KURT LYLE T. PAULINO

Computer Science Graduate · Game Development · Machine Learning · Web

+63 927 794 9970 | kurtlylep@gmail.com | [LinkedIn](#) | [GitHub](#)

Portfolio: kurtlylepaulino.github.io/FullPortfolio Technical: kurtlylepaulino.github.io/TechnicalPortfolio

SUMMARY

Computer Science graduate (game-development track) who ships across the stack: an award-winning Unity thesis game, a 90%+ accuracy melanoma-detection CNN, and a range of shipped Python tools and static web apps. Comfortable owning a project end to end — from algorithms and system design to testing and technical writing.

EDUCATION

De La Salle Lipa (DLSL)

2022 – 2026

Bachelor of Science in Computer Science · Elective track: Game Development

- Thesis recognized with **Best Thesis, Best Paper, and Best Presenter** awards.

PROJECTS

Circuit Breakers — 2D Cybersecurity Roguelike (Thesis)

Unity · C# · Firebase | 2024–2026

Lead Author · Systems & Balancing — *Best Thesis · Best Paper · Best Presenter*

- Served as lead author on the award-winning thesis paper and technical documentation for a roguelike that teaches cybersecurity concepts through play.
- Executed rigorous numerical balancing across gameplay and Firebase/Firestore-backed database systems, and built features spanning UI, mechanics, and progression.

Melanoma Skin Cancer Detection (Capstone)

Python · TensorFlow/Keras | 2025

Machine Learning — Convolutional Neural Network

- Built a CNN in TensorFlow/Keras that classifies dermoscopic images as benign or malignant at over 90% accuracy, with a reproducible notebook and saved checkpoints.
- Engineered and ran several experimental iterations comparing optimizers and activation functions to identify the most stable convergence patterns.

Fightmap Generator

Python · NumPy · Pillow · pytest | 2026

Procedural Generation — CLI + Desktop App

- Designed a dependency-light procedural battle-map generator: 6 layout archetypes across 3 themes (18 combinations) built from pure algorithms — room placement, corridor carving, and seeded value-noise scatter.
- Threaded a single seeded NumPy RNG through generation and rendering for byte-identical reproducibility, with a flood-fill connectivity guarantee and a pytest suite covering determinism, the full type×theme matrix, and the CLI.

The Canrael Codex

JavaScript · Web Audio API · GitHub Pages | 2026

Interactive Static Web App

- Built a zero-dependency, fully responsive single-page app: 525 hand-written entries filterable across 8 regions, an 81-image keyboard-navigable lightbox gallery, and region-themed Web Audio ambience — no build step or frameworks.

Library Management System

HTML · CSS · JavaScript | 2024

Multi-Role Web Application — CRUD

- Developed a platform tracking books, users, and activity across three roles (Admin, Librarian, Borrower), building the CRUD systems, activity logging, transaction records, and cross-role feedback flows.

Additional Projects

Unity / C# · Vanilla JS

- **Coin Crisis** — 2D Unity game on student lifestyle. **Haiku Daily & Jianghu Proverbs** — zero-dependency generative static sites with animated scenery and synthesized Web Audio soundscapes.

TECHNICAL SKILLS

Languages: C#, C++, Python, JavaScript

Machine Learning: TensorFlow, Keras, CNNs, NumPy, Matplotlib

Web & Mobile: HTML, CSS, React, React Native, Vanilla JS, Web Audio API

Game Development: Unity, Firebase, Firestore, numerical balancing

Tools & Workflow: Git/GitHub, Visual Studio, VS Code, Figma, Photoshop, Microsoft Office

Spoken Languages: Fluent English & Tagalog (written/oral); basic Japanese (Kana)

Creative: Technical & narrative writing; voice acting and audio production; strong presentation & communication skills
